### 8 structured data items are invalid

80

About this issue: This issue is triggered if structured data items contain fields that do not meet Google's guidelines <https://developers.google.com/search/docs/data-types/article>. Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results. If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings.

For more information on the structured data requirements, see <https://schema.org>, Google documentation <https://developers.google.com/search/docs/data-types/article> or our article <https://www.semrush.com/kb/1084-structured-data-items-site-audit>. How to fix: Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results.

We recommend that you use the Rich Results Test tool <https://search.google.com/test/rich-results> to review and validate your pages' structured data against their rich snippet requirements.

### 3 incorrect pages found in sitemap.xml

30

About this issue: A sitemap.xml file makes it easier for crawlers to discover the pages on your website. Only good pages intended for your visitors should be included in your sitemap.xml file. This error is triggered if your sitemap.xml contains URLs that: 1. lead to webpages with the same content. 2. redirect to a different webpage. 3. return non-200 status code. Populating your file with such URLs will confuse search engines, cause unnecessary crawling or may even result in your sitemap being rejected. How to fix: Review your sitemap.xml for any redirected, non-canonical or non-200 URLs. Provide the final destination URLs that are canonical and return a 200 status code.

0 pages returned 5XX status code

## WARNINGS

65 0

### 31 pages have low text-HTML ratio

31 0

About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content.

That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.

How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

### 26 pages have too much text within the title tags

26 0

About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article: <https://support.google.com/webmasters/answer/35624>.

How to fix: Try to rewrite your page titles to be 70 characters or less.

### 4 pages don't have an h1 heading

4 0

About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly.

How to fix: Provide a concise, relevant h1 heading for each of your page.

### 4 pages have a low word count

4 0

About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts.

For more information, please view this video: <https://www.youtube.com/watch?v=w3-obcXkyA4>. How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.

### 0 external links are broken

0 0

### 0 external images are broken

0 0

### 0 links on HTTPS pages lead to HTTP page

0 0

0 pages don't have enough text within the title tags

0

0 pages have duplicate H1 and title tags

0

0 pages don't have meta descriptions

0

0 pages have too many on-page links

0

0 URLs with a temporary redirect

0

0 images don't have alt attributes

0

0 pages have too many parameters in their URLs

0

0 pages have no hreflang and lang attributes

0

0 pages don't have character encoding declared

0

0 pages don't have doctype declared

0

0 pages have incompatible plugin content

0 0

0 issues with uncached JavaScript and CSS files

0 0

0 pages have a JavaScript and CSS total size that is too large

0 0

0 pages use too many JavaScript and CSS files

0 0

0 issues with unminified JavaScript and CSS files

0 0

0 link URLs are too long

0 0

www.diskdoctorsamerica.com

## NOTICES

9 0

### 8 pages have only one incoming internal link

8 0

About this issue: Having few incoming internal links means little to no visits or chances of being placed in search results. AI search engines use internal linking patterns to understand content importance and relationships within your site's knowledge network. Pages with few internal links may look less authoritative to AI algorithms and reduce your content's visibility and citation potential.

How to fix: Add more incoming internal links to pages with important content.

### lms.txt has formatting issues

1 0

About this issue: If your lms.txt file is incorrectly formatted, AI search engines that use it may interpret your website's content less accurately. How to fix: Review your lms.txt file and fix all issues. Visit lms.txt.org to find out how to properly format your file.

0 pages have more than one H1 tag

0 0

lms.txt not found

0 0

0 pages are blocked from crawling

0 0

0 page URLs are longer than 200 characters

0 0

0 outgoing external links contain nofollow attributes

0 0

## Low word count

- i** About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video: <https://www.youtube.com/watch?v=w3-obcXkyA4>. How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.

## Historical chart for audits

Period: September 4, 2025 (12:52) - September 4, 2025 (12:52)

## Low word count 4

## Missing h1

- i** About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. How to fix: Provide a concise, relevant h1 heading for each of your page.

## Pages with only one internal link

- i** About this issue: Having few incoming internal links means little to no visits or chances of being placed in search results. AI search engines use internal linking patterns to understand content importance and relationships within your site's knowledge network. Pages with few internal links may look less authoritative to AI algorithms and reduce your content's visibility and citation potential. How to fix: Add more incoming internal links to pages with important content.
